

ELIMINATE CHARGEBACKS AND **STREAMLINE ORDER FULFILLMENT** WITH CUBISCAN

ANVER CORP. USES CUBISCAN 110 TO ELIMINATE CHARGEBACKS & IMPROVE ORDER FULFILLMENT

CUSTOMER

ANVER Corporation is a manufacturer of all types of vacuum material handling equipment—from miniature vacuum cups to complete mill-duty vacuum lifting systems.

CHALLENGE

Find a way to eliminate chargebacks and improve ANVER's shipping process on approximately 450 shipments per week.

SOLUTION

The Cubiscan 110. It provides ANVER with accurate dimensional data and helps in eliminating costly chargebacks for incorrect DIMs.

RESULTS

- 30% savings per quarter
- Use Cubiscan to calculate dims & weights for order fulfillment
- Eliminated carrier chargebacks and additional freight bills for incorrect DIM weight calculations

ANVER CORPORATION

ANVER Corporation is a manufacturer of all types of vacuum material handling equipment—they offer everything from miniature vacuum cups to complete mill-duty vacuum lifting systems. If you need the latest in vacuum technology, ANVER is the first place you would look.

Founded in 1986 by Anton Vernooy, ANVER is a family-owned American company that prides itself on doing business the right way. ANVER strives to make sure that it is a company that people enjoy doing business with, while also providing premium engineering and cost-effective solutions. Located in Hudson, MA, ANVER manufactures and distributes its products worldwide.

CHALLENGES

Distributors these days face many challenges. Shipping costs are constantly rising, while the demand for online goods only increases. Customers often expect inexpensive, two-day shipping. This adds a lot of pressure to distributors, especially if they also

manufacture their own products. ANVER is responsible for approximately 450 shipments per week. Shipping and distribution was an area that ANVER knew it could improve. Costly carrier chargebacks were adding up and ANVER's process wasn't as efficient as it could be. It was time to find a solution.

Robert Vogel, Shipping Supervisor at ANVER, says, "We initially brought in a Cubiscan to eliminate carrier chargebacks." What Robert didn't know was that the Cubiscan could help his warehouse in many other ways. "Our Cubiscan has helped us do so much more than eliminate chargebacks, it has minimized freight costs, minimized parcel shipping/DIM weight charges, eliminated the tape measure, and made transferring dimensional data to Ship Manager and WorldShip easy," says Robert.

Collecting accurate weight and dims is simple with the Cubiscan 110. You place a box on the platform, tap a button, and let the measurement happen. ANVER then sends its data to UPS WorldShip, FedEx ShipManager, and ATI SmartBOL. Robert says, "We use our Cubiscan data in our stockroom to calculate accurate dims and weights for order fulfillment." One Cubiscan can make a big difference to a distributor. Streamlining your shipping process can only save you money. ANVER was able to save big with their Cubiscan, reducing their chargebacks and saving their employees' time. Robert estimates "We save about 30% each quarter with our Cubiscan."

CUBISCAN

The Cubiscan 110 is equipped with a flexible and convenient layout that allows for pass-through package processing. The Cubiscan 110 can measure objects up to 30 x 24 x 36 inches with an accuracy of 0.1 inches. Easily gather data and pass it along to nearly any system. Improve your warehouse one simple way—with the Cubiscan 110.
