

# Aramsco uses a Cubiscan 325 to become **35% MORE EFFICIENT** In Its Inventory Management

Aramsco is a leading North American provider of equipment, supplies, and support services tailored to specialty contractors in restoration, remediation, cleaning, and environmental sectors.

## BACKGROUND

Aramsco, founded in 1966 as a regional industrial safety products supplier, has evolved into North America's leading provider of equipment, supplies, and support services for specialty contractors. They sell a portfolio of over 40,000 products. With over 70 branches across the United States, Aramsco faced the challenge of managing diverse inventory across multiple locations. Explore how Aramsco leveraged Cubiscan to overcome operational hurdles and support its growth strategy.

# CHALLENGES

As Aramsco expanded to 70+ locations and 40,000+ products, the company struggled with inaccurate product data and manual receiving processes that impacted warehouse efficiency and shipping costs.

## Estimating Shipping Costs

Aramsco lacked accurate weight and dimensional data on its inventory. This led to difficulties in providing accurate shipping quotes.

## Inefficient Space Utilization

With plans to consolidate branches and establish more distribution centers, Aramsco needed data on product dimensions to improve warehouse space utilization.

## Manual Data Entry Errors

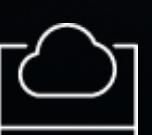

The process of manually measuring and recording product dimensions was time-consuming and prone to human error.

## Integration of 40,000+ SKUs

As Aramsco acquired new companies and expanded into new industries, they faced the challenge of quickly and accurately populating new product data into their inventory system.

## Missing Dimensional Data

With multiple branches nationwide, maintaining consistency in inventory management practices was becoming increasingly difficult.

# SOLUTIONS

## Cut Shipping Costs

Many inventory items didn't have correct weights and dimensions. The Cubiscan 325 provided accurate measurements which resulted in accurate shipping quotes.

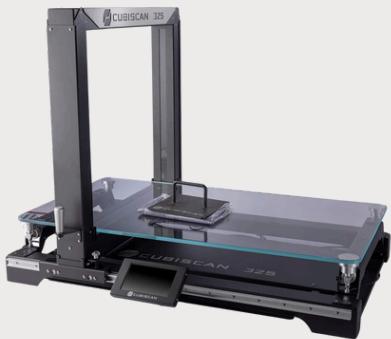

## Error Free Measurements

The Cubiscan 325 provides automated dimensioning and weighing, which eliminated data entry errors.

## Consolidate Two Facilities Into One

The Cubiscan 325 helped Aramsco consolidate their Pennsylvania and New Jersey facilities into one. By collecting dimensions and weight on inventory, Aramsco was able to reduce unused storage space dramatically.

## 95% of Items Dimensioned

Ronnie Bobo said "To analyze the warehouse space, a Cubiscan helped to have weights and dimensions in our system." Aramsco now has dims and weight on 95% of its inventory.

# RESULTS

After implementing the Cubiscan 325, Aramsco achieved a 33% increase in productivity, a 100% reduction in dim weight shipping corrections, and the company now receives and records 1000+ SKUs per week.

**33%**

Improvement in Productivity

Elimination of dim weight  
shipping corrections

**100%**

**1,000+**

Scans per week with a  
single Cubiscan device

Accurate dims and weight  
on 95% of their inventory

**95%**

# Key Results Achieved With THE CUBISCAN 325

Improved Shipping  
Processes

Integration of 40,000+  
New SKUs

100% Elimination of  
Manual Errors

Optimized Warehouse  
Space

Consolidated Two  
Warehouses Into One

Supported Company  
Expansion Efforts

## Ronnie Bobo, Operations Administrator at Aramsco

"We have 60+ sites across the country, many of which have unique SKUs and for several years, we obtained the weight/dims manually, which we got very good at, but there was always the concern for accuracy due to the manual process. After finally convincing our executive team of the value of purchasing the Cubiscan 325, we've seen a great improvement in the efficiency of the dims. Our efficiency has improved by over 25% and though we can't measure the accuracy improvement, it's good to know the data we're currently feeding into the system is 100% accurate. We are consolidating warehouses into distribution centers, and plan to purchase several more Cubiscan 325 units."

## Cubiscan 325

The Cubiscan 325 is designed to measure and weigh medium-sized SKUs for warehousing, packaging, fulfillment, and distribution. Using infrared LED technology, the Cubiscan 325 measures at a 1mm dimensional increment. If you're looking to maximize storage space, improve packaging decisions, and lower dimensional shipping costs, the Cubiscan 325 is a great place to start.
